The novel opens with Aunt Polly scouring the house in search of her nephew, Tom Sawyer. She finds him in the closet, discovers that his hands are covered with jam, and prepares to give him a whipping. Tom cries out theatrically, “Look behind you!” and when Aunt Polly turns, Tom escapes over the fence. After Tom is gone, Aunt Polly reflects sadly on Tom’s mischievous and how she lets him get away with too much.

Tom comes home at supper time, looking beat. Aunt Polly tells him he must be skipped school that afternoon and write essays. Tom’s head droops, and she feels a bit of compassion, for Tom’s soul is still very young. Tom’s half-brother, Ben, has just arrived, and Tom does not wish to be left alone with him. Tom has sworn the boy to a secret, and now he must be kept away from his own. Tom goes out of the house in a sulk.

When he returns home in the evening, Tom finds Aunt Polly waiting for him. She notices his dirtied clothes and resolves to make him work the next day, a Saturday, as punishment.

On Saturday morning, Aunt Polly sends Tom out to whiten the fence. Jim passes by, and Tom tries to get him to do some of the whitewashing in return for a “white alley,” a kind of marble. Jim almost agrees, but Aunt Polly appears and chases him off, leaving Tom alone with his chores.
Pain management, pain medicine, pain control or algiatry, is a branch of medicine employing an interdisciplinary approach for easing the suffering and improving the quality of life of those living with chronic pain. The typical pain management team includes medical practitioners, pharmacists, clinical psychologists, physiotherapists, and other specialists.

The Pain Management Collaboratory is jointly supported by the NIH, DoD, and VA. The goal of the PMC is to develop the capacity to implement cost-effective large-scale pragmatic clinical research in military and veteran health care delivery organizations focusing on non-pharmacological approaches to pain management and other comorbid conditions.

Pain management can be simple or complex, depending on the cause of the pain. An example of pain that is typically less complex would be nerve root irritation from a herniated disc with pain radiating down the leg.

Every day, millions of people suffer from chronic pain or addiction. Many of them have suffered for years from either chronic pain or addiction due to inadequate treatment.

Pain Management of Williamsport, LLC
